Why Are these Maps Different? Keep in mind the risk you may pose to those who cannot be vaccinated.
To determine the COVID-19 community level (map on right -- updated every Thursday), CDC looks at the combination of three metrics:

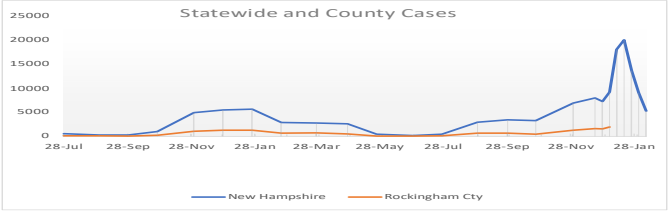

- **new COVID-19 hospital admissions per 100,000 population in the past 7 days**
- **the percent of staffed inpatient beds occupied by COVID-19 patients**
- **total new COVID-19 cases per 100,000 population in the past 7 days**

The CovidActNow.com map (at left, updated daily) uses data from CDC, each State's DHHS and trend models to determine their presentation of COVID risk based on these three metrics:

- **Daily new cases per 100,000 people (NY Times data)**
- **Infection rates based on 14-day trends (NY Times data)**
